

uploader

a highly secure file transfer system

ABOUT UPLOADER

Uploader is a highly secure file transfer system developed to enable businesses to send and receive confidential documents securely both internally and externally.

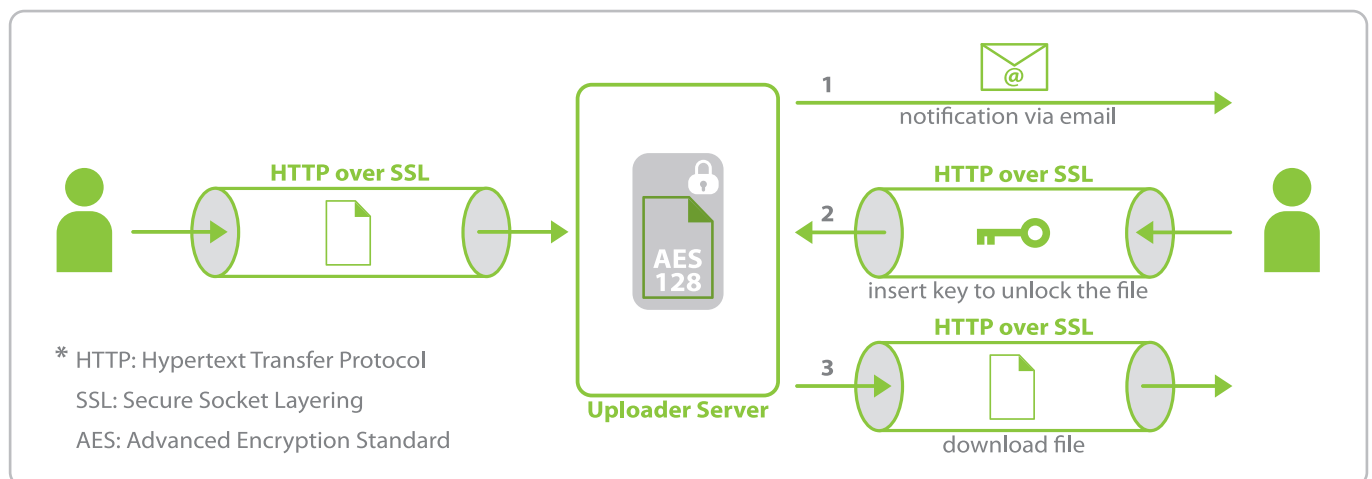

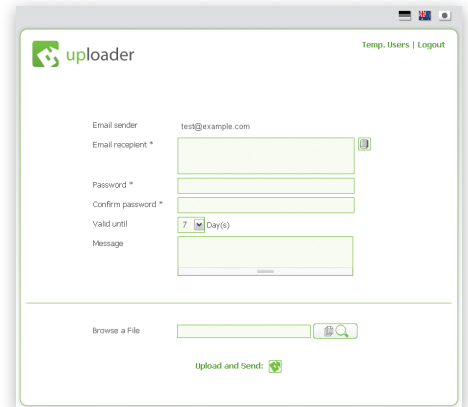

The Benefits:

- ✓ Overcomes file size limitations

In contrast to Email servers, Uploader allows users to send a number of large files simultaneously without imposing size restrictions.

- ✓ Maximises file security

When using Uploader, all files are transferred through the secure HTTP protocol using Secure Socket Layering (SSL). In addition, they are encrypted by a replay-limited end-to-end 128 bit Advanced Encryption Standard (AES) system before they are stored on the server. This ensures every measure of security is taken to protect the safety of the files.

USER ACCESS

Permanent users:	Temporary users:
Employees and administrators	Employees and administrators can assign clients and business associates a temporary user login to access Uploader.

VERSION VARIATIONS

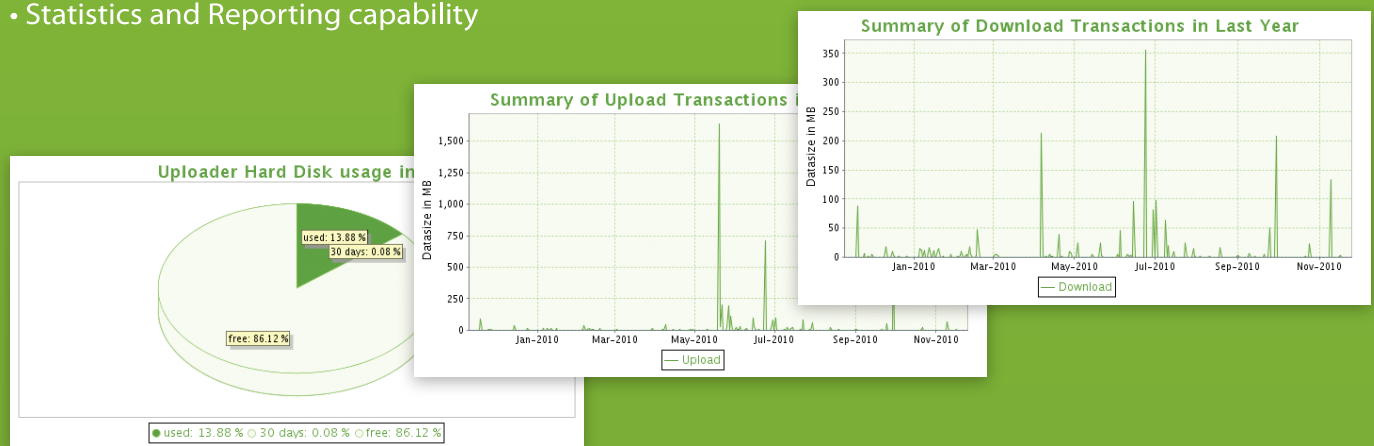

Uploader is available in two versions; Standard and Premium.

	Standard	Premium
Standard browser	✓	✓
